

The Catalina Olympic Swimspa and Swimtrainer Series offer the features of a spa, plunge pool and gym all in one beautifully engineered unit. You can enjoy a therapeutic massage to ease away the stress and strains of daily life, take a cool refreshing dip on a hot summer's day or benefit from a workout in your own private aqua gym. It is a fact that swimming / aerobic exercise is one of the best methods of building your body's strength and muscle toning.

Catalina Olympic Swimspas and Swimtrainers provide an ideal alternative to a traditional swimming pool. Swim in your back yard without the installation and running expense of a traditional swimming pool. Dream of your own pool but don't have the space? The Catalina exercise solution: 12', 14', 16' and 18' models available.

We offer an affordable wide range of Swimspas and Swimtrainers to suit every need utilizing the very latest technology with tried and tested components to bring you the very best power, performance design and spa experience.

PERFORMANCE

Each Catalina Olympic Series is fully programmable to run at your ideal temperature. The Marathon has the advantage of two fully independent heating zones. All models are fitted with 4 independently controlled hi-flo swim jet pumps; this allows not only a very powerful counter current but gives you more bather control. This combined with the specially developed adjustable 3 River swim jets, give a stable and direction controlled swimming current.

RUNNING COSTS

We only use High Density Thermal Pane Foam Insulation where the back of the shell and the back of the cabinet is covered with a thick layer of high density foam that uses the air in between as an insulator, much like a double pane window. Each model is also supplied with a UL Listed safety/insulation cover.

CUSTOM DESIGN

At Catalina we manufacture all our Swimspas and Swimtrainers giving you the ideal opportunity to *customize* your spa to your own specifications with any of the unique options and accessories.

SILENT AIR REDUCTION & HEATED AIR BLOWER SYSTEM

Our State-of-the-Art Heated Air Blower is unique in the spa industry. Catalina Spas has been using this feature for over 25 years. This silent air reduction system with our Thermo Pane Insulation is specially designed for colder climates. The silent air blower is noiseless, and the 1150 watt heater with built-in electrical element, heats the air before entering the spa. The heated air actually helps to maintain a more consistent water temperature, helping to reduce energy costs.

INSTALLATION

The Olympic Series are all totally self contained; the only service they require is a power supply. Providing there is a suitable base, your Swimspa or Swimtrainer can be installed in less than a day! A great feature of this is if you ever decide to move, you can take it with you, unlike a swimming pool.

Experience the Catalina difference . . . Comfort, design, engineered performance and service. During the past 39 years, satisfied customers have been responsible for Catalina Spas' phenomenal growth and success in the spa industry. We learned through 63 years of manufacturing experience, beginning with Catalina Boats. That customer satisfaction can only be created by combining State-Of-The-Art Manufacturing technology with the ultimate design for comfort and performance that is years ahead of its time. Catalina Spas possesses all these features, explaining why more customers are demanding the best--CATALINA. We are proud of the Catalina trademark, outstanding quality and the ultimate performance built into every Catalina Spa and Swim Spa.

eco
features

Each Catalina Olympic Series comes with Thermo Pane foam insulation and a Deluxe UL Listed insulation/safety cover.

Through our nationwide network of showrooms we will happily carry out a FREE no obligation survey to determine how & where you would like to locate your preferred model, to give advice on electrical requirements and whether or not a crane is required. You can then either design your own special model to your requirements on size, color and options or choose from one of five stock models available for early delivery. Either way, the installation process takes as little as 2 days from arrival to commissioning, leaving you to enjoy year-round recreation with the minimum of fuss. Please ask for our free installation guide.
